Using Jeopardy

**Preparation**
Print the PowerPoint “jeopardy_slides” first, then reverse them and print “jeopardy_questions” on the back. On the “questions” side, there is a point value specified for each question. Print several of the “Points single sheet” and cut them up appropriately. Tape a card (one of the sections of the sheet you just printed) over the answer on the front side of the question so that it will flip up to reveal the answer.

**Presentation**
For our game at the CEEE, we use a science fair style tri-fold back drop with overhead projector slide frames as holders for our cards. To fashion the frames to hold our cards, we cut the top portion off to form a U shape which our cards can slide in and out of fairly easily. Ours are laminated to preserve them through repeated use.
