Helping Students Protect the Environment and Live Well

Workshop learning objectives—You will be able to:

1. Explain that everything comes from the earth, and give examples of natural resources and products made from those resources.*
2. Understand that everything we buy has a long chain of environmental impacts.*
3. Plan individual and/or collective action to address environmental challenges.
4. Reflect through writing or drawing what matters most to you.*
5. Explain the difference between a need and a want and, with that knowledge, draw conclusions about your personal choices and the trade-offs of various choices.*
6. Identify at least two Iowa Core, NGSS or STEM skills you can meet using newly introduced resources.
7. Develop and teach an achievement-based mini-unit using resources introduced at the workshop.

*These learning objectives can be learning objectives for your students as well.
